The metrics that describe the economic contribution of the engineering and architectural services industry are striking—maybe even unrelatable. These comparisons transform the data to help put the outsized economic impact of the industry into perspective.

- 2x for each new job created in the engineering and architectural industry, two more are generated in sectors that support or benefit from their operations.
- 1 in 33 Americans owes his/her job to the engineering and architectural services industry.
- $122B IN TAXES
  Take that away and 128.6 million American households would have to pay $948 more in annual taxes to maintain current tax revenues.
- 172,000
  The engineering and architectural industry contributes enough annual taxes to pay for the repair of 172,000 of America’s 231,000 structurally deficient bridges.
